

Creating Podcasts

Prior steps – Create your audio in Audacity and export as mp3

There are 3 main steps to creating a podcast:

1. Create your audio file as an mp3 file.
2. **Upload your audio file to the Internet.**
3. **Create a link to the MP3 file in a blog post.**

PART TWO: UPLOAD YOUR AUDIO FILE TO THE INTERNET (PODOMATIC)

The easiest way to get your audio onto the Internet (without delving into the realm of creating the RSS feed yourself and using FTP) is to use a **podcast hosting site**.

There are lots of them – which one you use will depend on your preferences. You'll need to create an account – some are **free** and some will charge based on storage limits.

- [Ourmedia](http://ourmedia.org/) - <http://ourmedia.org/>
- [Odeo](http://odeo.com/) - <http://odeo.com/>
- [Gcast](http://www.gcast.com) - <http://www.gcast.com>
- [Podcast.com](http://podcast.com/home.php) - <http://podcast.com/home.php>
- [Podomatic](http://www.podomatic.com) gives you a [podcast page](http://www.podomatic.com) – <http://www.podomatic.com>
Try these [Online instructions for using Podomatic](http://users.chariot.net.au/~michaelc/pods/podomatic_instruct.htm) –
(http://users.chariot.net.au/~michaelc/pods/podomatic_instruct.htm)

1 Click here

[Sign Up](#) | [Log In](#) | [Forums](#) | [Help](#)

search

2 Fill in all these details

Create a free PodOmatic account: Already a member? [Log in](#)

Your name: First: Last:

Email:

Gender: Male Female

Date of birth: Year Month Day

Pick a PodOmatic address: .podOmatic.com
(also your username)

Password:
(minimum 6 characters)

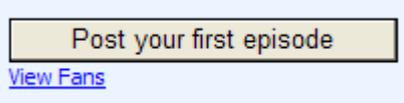

By joining you accept the PodOmatic [Terms of Service](#) and [Privacy Policy](#).

3 Click here

Make your address meaningful

Follow the instructions to set up your podcast page and then upload your audio.

1

Click on

2

Before you post your episode Podomatic requires you to provide some other information to accompany your audio:

[Get the Word Out](#) | [Embedded Player & Badge](#) | [Manage Address Book](#) | [Directories](#)

Now post your first episode!

The screenshot shows the Podomatic 'Now post your first episode!' form. It includes fields for 'Title:', 'Tags [?]:', and 'Comments:'. Below these are checkboxes for 'This show is explicit', 'This show is clean', and 'Hide for later'. At the bottom are buttons for 'Import', 'Record', 'mixOmatic', and 'Record Video'. Three callout boxes provide instructions: one for 'Tags' stating they assist search; one for 'Comments' stating they provide length and topic info; and one for the 'Import' button stating it's for audio from Audacity. A fourth callout box explains that images won't be seen on most mp3 players but will be on computers.

Key words that assist others search for your podcast

Enter information about length and topic of podcasts.

Images will not be seen if your podcast is listened to on most current mp3 players, but will be seen on more sophisticated players like the latest iPods. However, it will be seen on your computer screen.

**Use the Import button to upload the audio you created in Audacity
OR
Use the Record button to "phone it in"
You need to upload the file with the .mp3 file extension not .aup extension.**

Podomatic then asks if you want to notify friends and contacts by email that you have a new podcast. (This is optional).

Note:

- Your Podomatic site has own its own URL.
- All posts to your podcast site have their own URL.
- All audio (mp3) files within the post have their own URL (for direct linking to the audio file).

Comments Feature

When people visit your Podomatic site they can respond to any post

- 1) by submitting written comments. These appear on the site immediately and are public.
- 2) by recording an audio comment. Audio comments are sent to the owner of the Podomatic site via Podmail (all Podomatic users get a Podmail account automatically) and are private. (Your Podmail account can be used separately as a voice email tool.)

Editing Posts

It is possible to edit or delete posts at any time. If you go to your **My Podcast page** you will see each episode posted there with accompanying edit or delete buttons.

If you want to upload podcasts at home or work you will need to go to www.podomatic.com and sign into your account. Then click on either **Manage my Podcast** or **Post an Episode** to upload a new podcast.

The image shows a screenshot of the Podomatic website's navigation menu. The menu items are: Home, Podcasts, People, and My Podcast. Below these are several sub-links: My Podcast Page, Manage my Podcast, Post an Episode, Statistics, Preferences, Design, My Media, and Podcasting Tips. There are also links for Get The Word Out, Embedded Player & Badge, Manage Address Book, and Directories. Four callout boxes with red text and blue borders provide instructions:

- Top-left: Click on My Podcast Page to view your actual podcast page (i.e. this is what your audience sees)
- Top-right: This is where your media files are stored
- Bottom-left: Click on Manage my Podcast to post new podcast, edit existing podcasts, edit your podcast information and edit your information
- Bottom-right: Click on Preferences to change the design template of your podcast page

While you're waiting for your audio to be converted, click on **Manage your Podcast** and edit the information on about your podcast site and yourself. For example:

The image shows a screenshot of a Podomatic profile page for Sue Waters. At the top, there is a "Podcasting Tip" box: "Podcasting Tip: [New!](#) [Embed your podcast](#) on MySpace, your [profile](#), blogs, and more."

The profile header includes the name "Sue Waters" and a link to "Edit my info". Below the name is a profile picture of Sue Waters, a woman with short brown hair wearing a light blue shirt. To the right of the picture, her details are listed: Female, Perth, WA Australia, Hometown: Perth, WA Australia, Joined: Aug 27, 2006, and Contact Sue: aguaculturepda. There is a link "View/Edit Photos (2)" below the picture.

The "About Me" section contains the following text: "I work as an aquaculture lecturer at the WA Maritime Training Centre, Challenger TAFE in Western Australia. I have been working with a range of mobile technologies with students since late 2005. The purpose of my podcast and wiki site is to document my learning journey with mobile and Web 2.0 technology so that I can share my experiences with other lecturers. My main focus is how these technologies can be used practically to benefit lecturers and students."

On the left side of the profile, there is a section for "Mobile Technology in TAFE" with a circular logo. It includes a link to "Edit cover art" and a "my wikipace" button. The text in this section reads: "Mobile Technology in TAFE websites are all about m-learning, e-learning and mobile technology. I also have more information at [Mobile Technology in TAFE wiki](#) and [Mobile Technology in TAFE blog](#). Please use my sites to learn more about how we use these technologies with students. Some of the older episodes do not start when you press play click on download instead!"

PART 3: CREATE A LINK TO YOUR PODCAST FROM YOUR BLOG/ WEBSITE...

By now you'll have noticed that most podcasts use particular icons to give listeners options to download or subscribe to them via RSS.

Obviously these ones were designed by someone and we can't just use them without permission – how about designing your own or getting your students to design their own icon?

[Podcasting News](#) has these buttons that were created by Tim Madden, and are licensed with a [Creative Commons license](#). This means you're free to use them, but you should give Tim credit!

- Go to http://www.podcastingnews.com/topics/Promote_Your_Podcast.html. This great site also has lots of other podcasting resources.

These three logos were made by Tim Madden under the Creative Commons license which means you can use them free as long as you give him credit. He has many more cool logos at his site (<http://www.timmadden.com.au/podcast-logos.htm>)

Make your own buttons using [Feed For All's](#) free button builder eg

- <http://www.feedforall.com/public/rss-graphic-tool.htm>

Once you have uploaded your mp3 file into one of these free services you'll notice that all of them automatically create an RSS feed for your mp3 file so that it can be found by an RSS aggregator.

- Look for the RSS button, right mouse click on it, and copy the link location or shortcut.
- Then make the hyperlink using the **hyperlink icon** on your blog/ Portal site/ wiki (or whatever) toolbar and the icon you're using to represent your podcast.
